

DOCUMENT 2

INNOMINE DESIGN SYSTEM

Version: 1.0

Status: Draft

Project: Innomine

Prepared By: Mohammed Kazim Khan & OpenAI ChatGPT

Purpose of this Document

The Innomine Design System establishes a unified visual language, interaction philosophy, and component library for the platform.

Its purpose is to ensure that every screen, component, animation, layout, and interaction provides a consistent, premium, and intuitive experience across the entire ecosystem.

This document serves as the primary reference for UI/UX designers, frontend developers, AI coding agents, and future contributors.

Every interface element developed for Innomine must follow the principles defined in this document.

1. Design Philosophy

The design philosophy of Innomine is centered around one idea:

Innovation deserves a premium stage.

Unlike traditional marketplaces, Innomine should not feel crowded or overwhelming. The interface should highlight products, creators, and stories while remaining clean, elegant, and distraction-free.

Every design decision should reinforce trust, quality, innovation, and professionalism.

The user should immediately feel that they are exploring groundbreaking products rather than browsing a conventional online store.

2. Design Principles

Every interface should follow these principles.

Innovation First

The product should always remain the hero.

The interface should never compete with the product.

Minimalism

Remove unnecessary visual noise.

Whitespace is a design element.

Avoid excessive decorations.

Premium Experience

Every interaction should feel polished.

Animations should be smooth.

Cards should feel elegant.

Transitions should be meaningful.

Trust

Trust should be visible everywhere.

Verified innovators.

Clear pricing.

Transparent reviews.

Professional layouts.

Performance

Beautiful interfaces should never sacrifice speed.

Animations should remain lightweight.

Pages should load quickly.

Accessibility

The platform must remain usable for every user.

Support:

- Keyboard navigation
- Screen readers
- Accessible color contrast
- Focus indicators

- Responsive typography
-

Consistency

Every page should feel like it belongs to the same product.

Buttons.

Cards.

Forms.

Typography.

Spacing.

Colors.

Everything must follow one design language.

3. Brand Identity

Brand Name

Innomine

Brand Meaning

"Innomine" represents **Innovation + Commerce + Community**.

The platform exists to connect creators and customers through innovation.

Brand Personality

The brand should feel:

- Innovative
- Modern
- Professional
- Premium
- Trustworthy
- Intelligent
- Inspiring
- Minimal
- Creator-focused

Avoid feeling:

- Cheap
- Playful
- Cluttered
- Corporate
- Overly colorful
- Template-like

4. Visual Identity

The visual language should combine the elegance of premium SaaS products with the excitement of innovation.

Design inspiration:

- Apple
- Linear
- Stripe
- Notion
- Vercel
- Rivian
- Tesla
- Arc Browser

These are references for quality and craftsmanship—not templates to copy.

5. Brand Values

The design should communicate:

- Innovation
- Discovery
- Curiosity
- Trust
- Transparency
- Quality
- Simplicity

- Precision
 - Engineering Excellence
-

6. User Experience Goals

Every visitor should experience the following journey:

First Impression

"Wow."

The homepage should immediately communicate that this is a premium innovation marketplace.

Exploration

Browsing should feel effortless.

Navigation should encourage curiosity.

Discovery

Products should feel exciting to discover.

Reels should naturally lead users to product pages.

Trust

The interface should inspire confidence before purchase.

Purchase

The checkout process should be fast, intuitive, and secure.

Return Visit

Users should leave wanting to discover more innovations.

7. Brand Voice

The product copy should be:

- Clear
- Professional

- Human
- Inspiring
- Confident
- Simple

Avoid:

- Corporate jargon
 - Marketing buzzwords
 - Overly technical language
 - Excessive emojis
 - Clickbait
-

8. Emotional Design Goals

The interface should make users feel:

- Curious
- Inspired
- Excited
- Confident
- Empowered
- Connected to creators

Not:

- Overwhelmed
 - Distracted
 - Confused
-

9. Design Quality Standard

Every screen should meet these criteria before it is considered complete:

- Clean layout
- Excellent typography
- Consistent spacing
- Smooth interactions
- Responsive behavior

- Accessible components
 - Fast loading
 - Pixel-level consistency
-

10. Core Design Rules

These are non-negotiable.

- Mobile-first design.
 - Responsive layouts.
 - Consistent spacing scale.
 - Maximum readability.
 - Accessible color contrast.
 - Reusable components.
 - No inconsistent shadows or border radii.
 - No decorative animations that reduce usability.
 - Every interaction should have clear visual feedback.
-

Excellent. I also think **Option A** is the best choice.

I'm going to **lock this decision** because it will influence every UI decision we make from now on.

11. Color Philosophy

Colors should never distract from the product.

Instead, they should create:

- Trust
- Elegance
- Innovation
- Professionalism

The interface should remain mostly neutral, allowing product images and videos to become the primary visual focus.

12. Color Palette

Primary Colors

These represent the brand.

Primary

- Deep Graphite (#111827)

Used for:

- Navigation
 - Primary Buttons
 - Headlines
 - Important UI Elements
-

Secondary

- Pure White (#FFFFFF)

Used for:

- Backgrounds
 - Cards
 - Forms
-

Accent

- Electric Blue (#2563EB)

Used sparingly for:

- CTAs
 - Links
 - Selected States
 - Progress Indicators
 - Active Navigation
-

Neutral Palette

- Slate 50
- Slate 100
- Slate 200
- Slate 300
- Slate 500

- Slate 700
- Slate 900

Used for typography, borders, backgrounds, and subtle UI separation.

Semantic Colors

Success

Emerald Green

Warning

Amber

Error

Red

Information

Blue

These colors should only communicate system states—not branding.

13. Dark Mode

Dark Mode is a **first-class feature**, not an afterthought.

Requirements:

- No pure black backgrounds.
- Use dark gray surfaces for better readability.
- Preserve accessibility.
- Images should remain vibrant.
- Brand accent color remains consistent.

Every page must support:

- Light Theme
- Dark Theme

Users should be able to switch themes manually, while the system also respects the operating system preference.

14. Typography

Typography is one of the most important parts of the design.

We want a clean, highly readable interface.

Font Family

Primary:

Inter

Fallback:

- System UI
- Segoe UI
- SF Pro (Apple devices)

Reasons:

- Excellent readability
- Widely adopted
- Clean appearance
- Professional feel
- Strong multilingual support

Font Hierarchy

Helper text

Typography Rules

Never use more than:

- One font family
- Five font sizes per page (excluding headings)
- Three font weights within the same section

Maintain consistent line heights and spacing.

15. Iconography

Icons should be:

- Simple
- Thin
- Modern
- Rounded
- Minimal

Preferred libraries:

- Lucide React (Primary)
- Heroicons (Secondary)

Avoid mixing multiple icon styles.

16. Spacing System

The platform shall follow an **8-point spacing system**.

Spacing Scale:

- 4
- 8
- 12
- 16
- 24
- 32
- 48
- 64
- 80
- 96

This creates visual consistency throughout the application.

17. Border Radius

Use a consistent radius scale:

Small Components

- 8px

Cards

- 16px

Large Containers

- 20–24px

Buttons

- 12px

Avoid mixing random border radius values.

18. Shadows

Shadows should be subtle and used sparingly.

Three levels:

Level 1

Cards

Level 2

Dropdowns

Level 3

Modals

Avoid heavy shadows or excessive blur.

19. Elevation

Hierarchy should primarily be created through:

- Whitespace
- Typography
- Contrast

Not by stacking large shadows.

20. Glassmorphism Policy

Glassmorphism may be used only in:

- Navigation Bar
- Search Overlay
- Floating Player
- Notification Panel

It should **never** be applied to the main product cards or product pages, as it reduces readability and distracts from the content.

21. Layout System

21.1 Design Philosophy

The layout system shall emphasize clarity, hierarchy, and focus. Every page should naturally guide the user's attention toward products, creators, and actions without overwhelming them.

The interface shall use consistent spacing, alignment, and visual rhythm across all pages.

21.2 Grid System

The application shall follow a **12-column responsive grid system**.

Desktop

- 12 Columns
 - Maximum Container Width: **1440px**
 - Default Content Width: **1280px**
-

Laptop

- 12 Columns
 - Container Width: **1200px**
-

Tablet

- 8 Columns
-

Mobile

- 4 Columns
-

21.3 Responsive Breakpoints

Device	Width
Mobile	<640px
Small Tablet	640px
Tablet	768px
Laptop	1024px
Desktop	1280px
Large Desktop	1536px+

21.4 Container Rules

The website shall use centered containers with consistent horizontal padding.

Padding Scale:

- Mobile → 16px
- Tablet → 24px
- Desktop → 32px

21.5 Vertical Rhythm

Every section shall maintain consistent spacing.

Small Section

64px

Medium Section

96px

Large Hero Section

128–160px

22. Navigation System

Navigation is the backbone of Innomine and should remain intuitive regardless of user role.

22.1 Public Navigation

Primary Navigation:

- Home
- Explore
- Categories
- Innovation Feed
- Innovators
- About

Right Side:

- Search
 - Notifications (Logged-in)
 - Wishlist
 - Cart
 - Profile
-

22.2 Buyer Navigation

Dashboard Sidebar:

- Dashboard

- Orders
 - Wishlist
 - Saved Reels
 - Notifications
 - Addresses
 - Payments
 - Settings
-

22.3 Innovator Navigation

Dashboard Sidebar:

- Overview
 - Products
 - Upload Product
 - Inventory
 - Orders
 - Reels
 - Followers
 - Analytics
 - Verification
 - Coupons
 - Store Settings
-

22.4 Admin Navigation

Dashboard Sidebar:

- Overview
- Users
- Innovators
- Products
- Innovation Verification
- Reels
- Categories

- Reports
 - CMS
 - Payments
 - Support
 - Audit Logs
 - Settings
-

22.5 Navigation Behavior

Navigation Bar:

- Sticky
 - Slight glass effect
 - Shrinks subtly on scroll
 - Smooth transitions
 - Search always accessible
-

23. Component Library

Every reusable UI element shall follow a unified visual language.

Buttons

Types:

- Primary
- Secondary
- Outline
- Ghost
- Danger
- Success
- Icon Button

States:

- Default
- Hover
- Active

- Loading
- Disabled

Buttons shall include subtle hover elevation and smooth transitions.

Cards

Card Types:

- Product Card
- Reel Card
- Innovator Card
- Category Card
- Analytics Card
- Dashboard Card

Cards should maintain:

- Rounded corners
- Soft shadows
- Clean spacing
- Hover animation
- Consistent padding

Badges

Badge Types:

- Verified Innovator
- Innovation Verified
- Patent Pending
- Patent Granted
- New
- Trending
- Featured
- Bestseller
- Limited Stock
- Coming Soon

Badges should remain compact and easily recognizable.

Inputs

Input components:

- Text Field
 - Email
 - Password
 - Search
 - Phone
 - Number
 - Date
 - File Upload
 - Multi-select
 - Dropdown
 - Checkbox
 - Radio Button
 - Toggle Switch
-

Modals

Every modal shall support:

- Keyboard navigation
 - Focus trapping
 - ESC to close
 - Responsive layout
-

Tables

Tables shall support:

- Sorting
- Filtering
- Search
- Pagination

- Export
-

Toast Notifications

Types:

- Success
 - Warning
 - Error
 - Information
-

Tooltips

Used for:

- Icons
 - Dashboard actions
 - Analytics
 - Technical specifications
-

24. Product Card Design

This is one of the most important components of the platform.

Every product card shall display:

- Product Image
- Product Name
- Short Description
- Price
- Discount (if applicable)
- Innovation Verification Badge
- Seller Name
- Rating
- Number of Reviews
- Category
- Wishlist Button

Hover Behavior:

- Slight lift animation
- Soft shadow increase
- Image zoom (very subtle)
- Quick View button
- Add to Wishlist
- Add to Cart

Product cards must never feel crowded.

Whitespace should be preserved.

Product Image

Image Ratio:

4:5

Support:

- Multiple Images
 - 360° View (Future)
 - AR Preview (Future)
-

Product Page Layout

The product detail page should prioritize storytelling.

Sections:

1. Product Gallery
 2. Product Summary
 3. Buy Box
 4. Innovation Story
 5. Technical Specifications
 6. Founder Information
 7. Innovation Timeline
 8. Demo Videos
 9. Reviews
 10. Related Innovations
-

25. Innovation Feed (Signature Experience)

This section defines the visual identity of Innomine.

The Innovation Feed shall feel immersive while remaining commerce-focused.

Unlike entertainment platforms, every interaction should encourage product discovery.

Feed Layout

Vertical full-screen experience.

Each reel occupies one viewport.

Reel UI

Visible Elements:

- Product Name
 - Product Image
 - Product Price
 - Buy Now
 - Visit Product
 - Like
 - Comment
 - Share
 - Save
 - Follow Innovator
 - Innovation Verification Badge
-

Feed Navigation

Users may navigate through:

- Following
 - Trending
 - Latest
 - Categories
 - AI Recommended (Future)
-

Creator Information

Every reel shall prominently display:

- Innovator Profile Picture
 - Name
 - Verification Status
 - Store Link
 - Follow Button
-

Interaction Principles

The feed should encourage exploration without becoming addictive or distracting.

Videos should educate and demonstrate products rather than encourage endless passive scrolling.

26. Form Design System

Forms are one of the most frequently used interaction patterns in Innomine. They must be intuitive, accessible, responsive, and visually consistent across the platform.

26.1 Design Principles

Every form shall:

- Follow a single-column layout where practical.
 - Maintain consistent spacing between fields.
 - Clearly distinguish required and optional fields.
 - Provide real-time validation feedback.
 - Minimize user effort through smart defaults and autofill support.
 - Be fully responsive across all screen sizes.
-

26.2 Input Components

The platform shall support standardized input components, including:

- Text Input
- Email Input
- Password Input
- Phone Number Input
- Search Field

- Number Input
- Text Area
- Date Picker
- Dropdown Select
- Multi-Select
- Radio Buttons
- Checkboxes
- Toggle Switches
- File Upload
- Image Upload
- Video Upload

All input components shall maintain consistent styling, spacing, and interaction behavior.

26.3 Validation

Forms shall provide immediate and user-friendly validation.

Validation shall include:

- Required Field Indicators
- Password Strength Indicators
- Email Format Validation
- Phone Number Validation
- File Type Validation
- File Size Validation
- Duplicate Username or Email Checks
- Inline Error Messages

Error messages shall clearly explain the issue and guide users toward resolution.

26.4 File Upload Experience

Since Innomine is media-rich, file uploads are a core experience.

Uploads shall support:

- Drag-and-Drop
- Click to Upload

- Progress Indicators
 - Preview Before Submission
 - Retry on Failure
 - Cancel Upload
 - Multiple File Uploads
 - Image Cropping (Profile Pictures)
 - Automatic Image Optimization
-

26.5 Form States

Every form component shall support:

- Default
- Hover
- Focus
- Filled
- Disabled
- Error
- Success
- Loading

Visual feedback shall remain consistent throughout the platform.

27. Dashboard Design System

Each dashboard within Innomine shall provide a clean, information-rich, and role-specific experience. While dashboards share a common design language, each user role shall have functionality tailored to its responsibilities.

27.1 Shared Dashboard Principles

All dashboards shall:

- Use a responsive sidebar navigation.
- Display key metrics at the top.
- Follow a modular card-based layout.
- Provide quick access to primary actions.
- Support both Light and Dark modes.

- Maintain visual consistency with the overall Design System.
-

27.2 Buyer Dashboard

The Buyer Dashboard shall include:

- Welcome Overview
- Recent Orders
- Wishlist
- Saved Reels
- Recommended Products
- Recently Viewed Products
- Notifications
- Address Book
- Payment Methods
- Account Settings

Primary Goal:

Provide buyers with quick access to purchases, saved content, and personalized recommendations.

27.3 Innovator Dashboard

The Innovator Dashboard serves as the central workspace for sellers.

Modules include:

- Sales Overview
- Revenue Analytics
- Product Management
- Inventory Management
- Order Management
- Reel Management
- Followers & Community
- Customer Reviews
- Innovation Verification Status
- Coupons & Promotions

- Store Customization
- Performance Insights

Primary Goal:

Empower innovators to efficiently manage products, monitor performance, and grow their business.

27.4 Administrator Dashboard

The Administrator Dashboard provides complete platform oversight.

Modules include:

- Platform Overview
- User Management
- Innovator Verification
- Innovation Verification Requests
- Product Moderation
- Reel Moderation
- Reports & Analytics
- Category Management
- Payment Monitoring
- Support Ticket Management
- Content Management System (CMS)
- Audit Logs
- Platform Configuration

Primary Goal:

Maintain platform quality, security, operational efficiency, and trust.

27.5 Dashboard Design Standards

Every dashboard shall follow these design standards:

- Fixed sidebar with collapsible behavior.
- Sticky top navigation.
- Responsive metric cards.
- Consistent chart styles.

- Reusable data tables.
 - Uniform spacing and typography.
 - Quick Action buttons prominently displayed.
 - Search and filtering on data-heavy pages.
 - Breadcrumb navigation where appropriate.
-

28. Motion Design

Motion should enhance usability, communicate state changes, and reinforce the premium feel of the platform. Animations must be subtle, purposeful, and performant.

Motion Principles

- Motion must never delay user interaction.
- Every animation should have a functional purpose.
- Avoid excessive movement or decorative effects.
- Maintain 60 FPS where possible.
- Respect the user's reduced motion preferences.

Standard Animation Durations

- Micro Interaction: 150–200ms
- Button Hover: 200ms
- Card Hover: 250ms
- Modal Open/Close: 300ms
- Drawer: 300–350ms
- Page Transition: 400–500ms

Motion Types

- Fade In
- Fade Out
- Slide
- Scale
- Smooth Hover Elevation
- Skeleton Loading
- Scroll Reveal
- Toast Animations

- Drawer Transitions
-

29. Responsive Design

Innomine follows a **Mobile-First** design strategy.

Supported Devices

- Mobile Phones
- Tablets
- Laptops
- Desktop Computers
- Ultra-wide Monitors

Responsive Principles

- No horizontal scrolling.
- Touch-friendly controls.
- Flexible grids.
- Fluid typography.
- Adaptive spacing.
- Responsive navigation.

Navigation Behavior

Mobile

- Bottom Navigation (future mobile app)
- Hamburger Menu

Desktop

- Horizontal Navigation
- Sticky Header

Dashboard

Desktop

- Sidebar Navigation

Tablet

- Collapsible Sidebar

Mobile

- Drawer Navigation

30. Accessibility Standards

Accessibility shall be considered during every stage of design and development.

Requirements

- WCAG 2.2 AA compliance
- Keyboard navigation
- Screen reader compatibility
- Proper semantic HTML
- Sufficient color contrast
- Visible focus indicators
- Accessible forms
- Descriptive labels
- Alternative text for images
- Accessible error messaging

Interactive elements shall never rely solely on color to communicate meaning.

31. Empty States

Empty states should guide users toward meaningful actions instead of displaying blank pages.

Examples include:

Empty Cart

Message:

"Your cart is empty. Discover innovative products waiting to solve real-world problems."

Primary Action:

Explore Products

Empty Wishlist

Message:

"Save products you love and find them easily later."

Action:

Browse Innovations

No Orders

Message:
"You haven't placed an order yet."

Action:
Explore Marketplace

Seller Dashboard

No Products

Message:
"Your innovation journey starts here."

Action:
Upload First Product

Innovation Feed

No Following Activity

Message:
"Follow innovators to personalize your feed."

Action:
Discover Innovators

32. Error States

The platform should communicate failures clearly and provide recovery options.

404

Friendly illustration.

Message:
"The page you're looking for doesn't exist."

Action:
Return Home

500

Message:
"Something went wrong on our side."

Action:
Retry

Payment Failed

Clear explanation.

Retry Payment button.

Contact Support.

Upload Failed

Show upload progress.

Retry option.

Resume upload if possible.

Network Offline

Offline illustration.

Automatic retry.

Manual refresh.

33. Loading States

The platform should always communicate progress.

Preferred loading patterns:

- Skeleton Screens
- Progress Indicators
- Optimistic UI
- Image Placeholders
- Lazy Loading

Avoid long blocking spinners whenever possible.

34. Design Tokens

All design values shall be centralized.

These tokens should directly map to the Tailwind CSS configuration to ensure consistency and simplify maintenance.

35. UI Consistency Rules

Every page, feature, and component must follow these rules:

- Use approved color palette only.
- Maintain consistent typography.
- Use standardized spacing scale.
- Use reusable components.
- Avoid duplicate component implementations.
- Maintain consistent iconography.
- Preserve visual hierarchy.
- Ensure responsive layouts.
- Follow accessibility standards.
- Optimize for performance.
- Keep interactions predictable.
- Avoid unnecessary visual clutter.
- Maintain a premium, minimalist aesthetic.
- Product content must always take visual priority over interface decoration.
- All new components must conform to the established Design System before being introduced into the application.

End of Design System v1.0
